

# Megasys

## Hospitality Management Systems

### Fast Facts

## Megasys Web Reservation Interface

**WebRes** provides a direct link between your website and your Megasys PMS, allowing prospective guests to query availability and request or confirm an online booking with your company. This process is completed automatically between your website and Megasys, providing you with complete control.

### Features

- Booking and inquiry processes are built into your existing web pages and are fully compatible with your Megasys system taking full advantage of what it has to offer
- Make individual reservations, group reservations, club reservations and owner reservations
- Validate and authorize credit cards
- Automatically post to Advance Deposits
- Hard block rooms through the internet
- Configure the system to email confirmations automatically both in text and HTML format
- Maintain a separate inventory for the online reservations module, but take rooms out of general availability when any room is booked online
- Can be configured to allow guests to check availability and rate only, and require them to confirm and complete reservation personally via the phone
- Fully compatible with Megasys and takes complete advantage of your existing system.
- Real Time availability
- Provides increased access to your market while reducing booking costs
- 24 hour automated inquiry and booking capability
- Eliminates high phone costs for the international traveler
- Reduces your 800 number costs by eliminating or reducing phone time
- Allows Guest to shop your properties for availability and rates
